

Mac OS X Dialup & Email Settings

1. Open the **Apple Menu**, then **System Preferences**, then select **Network**.

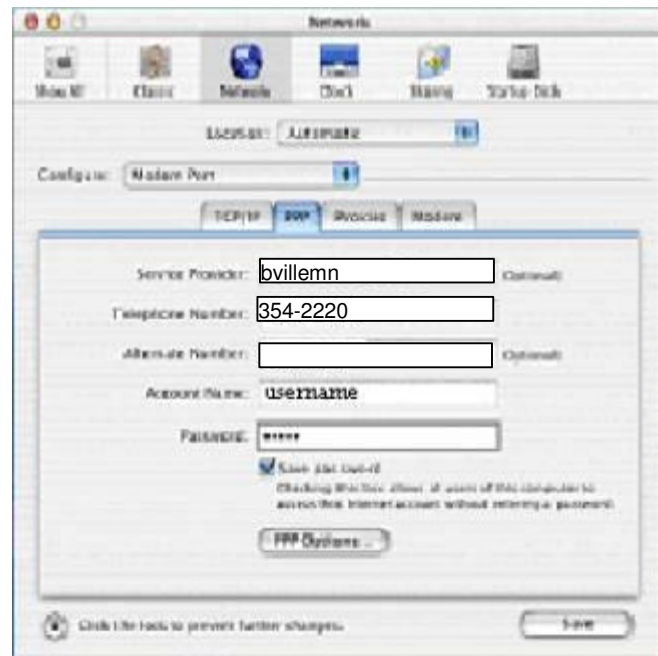

2. In the **Network** window, select the **PPP** tab.

3. Type **bvillemn** in the **Service Provider** field.

4. Enter 354-2220 in the phone number field.

5. Type your **username** for Account Name and type in your **Password**.

6. Click the **PPP Options** button.

7. Make sure **Connect automatically when starting TCP/IP application** is checked.

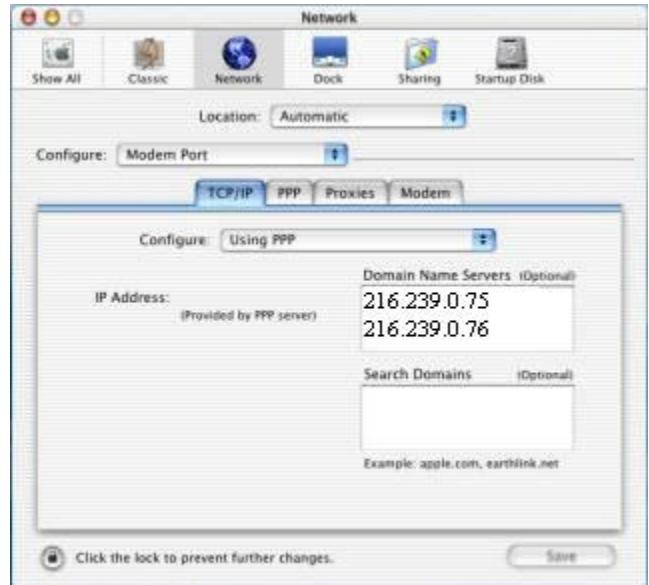

8. Click the "TCP/IP" tab.

9. Make sure Configure **Using PPP** is selected.

10. Enter **216.239.0.75** and **216.239.0.76** in the Domain Name Servers.

11. Next, click the **Modem** tab:

12. Make sure your modem is selected.

If the kind of modem your machine is using is not displayed, you should select it from the pop-up menu by clicking on the blue area containing the up and down arrows.

Choose the selection that best matches your modem type/model. If you don't see your modem in the list, you may need to reinstall the software that came with your modem.

13. Click on **save**.

Now, when you open an Internet application, your computer will open this window to connect to the Internet.
